

Care Manager™ – Event Capture Device

- Easy-to-Use 2-Way Communication
- Mobile Event Notification
- Point of Care Event Classification
- Audible or Vibrating Alert
- Battery Strength Indicators
- Fully Supervised
- Replaceable Battery
- 4-Line by 16-Character Display

Revolutionary New Technology for Event Capture

The Care Manager™ is a pocket-sized, battery-powered device carried by a caregiver. The communication device allows a caregiver to receive resident/patient calls and other alarms while roaming anywhere within the facility's coverage area. Each text page indicates the type of alarm, resident name, and location. The device's two-way communication technology allows a caregiver to classify an event at point-of-care on the Care Manager, saving time by eliminating frequent trips to a computer, or a post-shift documentation. Also, the two-way communication allows the caregiver to call additional staff for assistance.

Continuous Assurance of Proper Operation

The Code Alert® Wireless Call Solution fully supervises the Care Manager and will alert staff if a problem develops or if a signal is not received by the system. The Care Manager is battery operated, and the battery can be easily replaced by the facility. When the battery is low, staff is periodically notified until the battery is changed.

Advanced Direct Sequence Spread Spectrum Technology

The Care Manager operates in the 2.4 GHz frequency band using Advanced Direct Sequence Spread Spectrum Technology. This technology assures reliable signal reception over a large area.

For more information on the Care Manager™ and point of care event capture please call us at 800-669-9946 or visit us at www.rft.com.
